

GPT-4

Write python code that will read a PDF add an empty signature placeholder to the PDF.

To add an empty signature placeholder to a PDF, you can use the `PyPDF2` and `reportlab` libraries. Below is a Python script that does this:

1. First, you need to install the required libraries:

bash

Copy code

```
pip install pypdf2 reportlab
```

1. Here's a Python script that adds an empty signature placeholder to a PDF:

python

Copy code

```
import PyPDF2
from reportlab.pdfgen import canvas
from reportlab.lib.pagesizes import letter
```
